

Story 1

Re-production

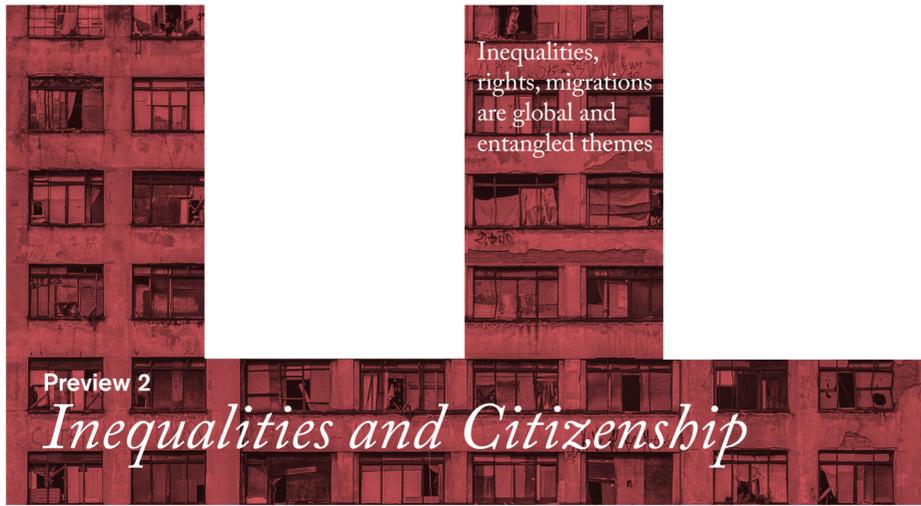

Manufacturing is coming back to the city, in new forms

Inequalities, rights, migrations are global and entangled themes

Preview 2

Inequalities and Citizenship

Story 3

Adaptive Remediation

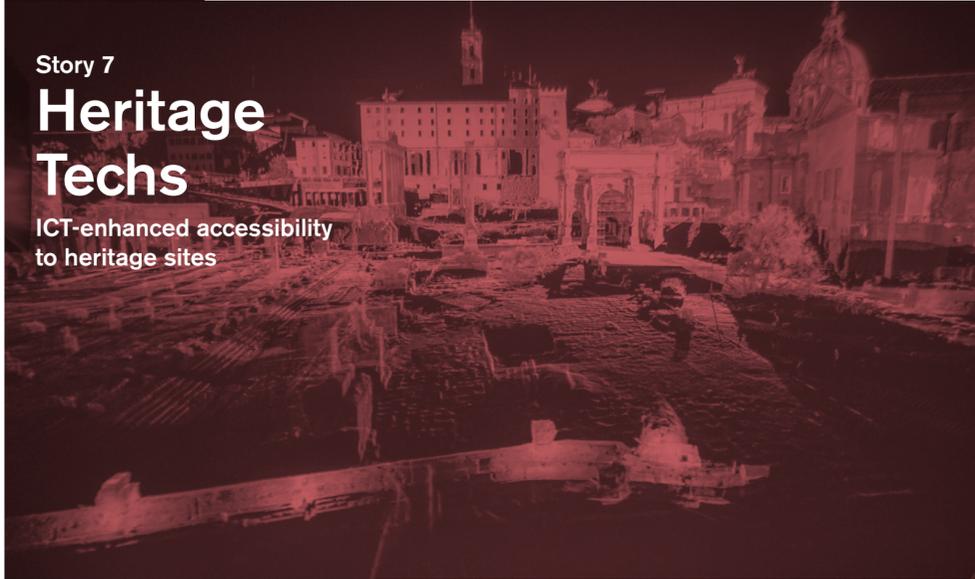

Legacy can be a debt. Environmental remediation meets architectural design in abandoned industrial sites

Story 7

Heritage Techs

ICT-enhanced accessibility to heritage sites

Story 5

Energy Policies

The deep energy renovation policies for the existing building stock cannot be implemented on a large scale

Infrastructure 2

Legacy Mobile Lab

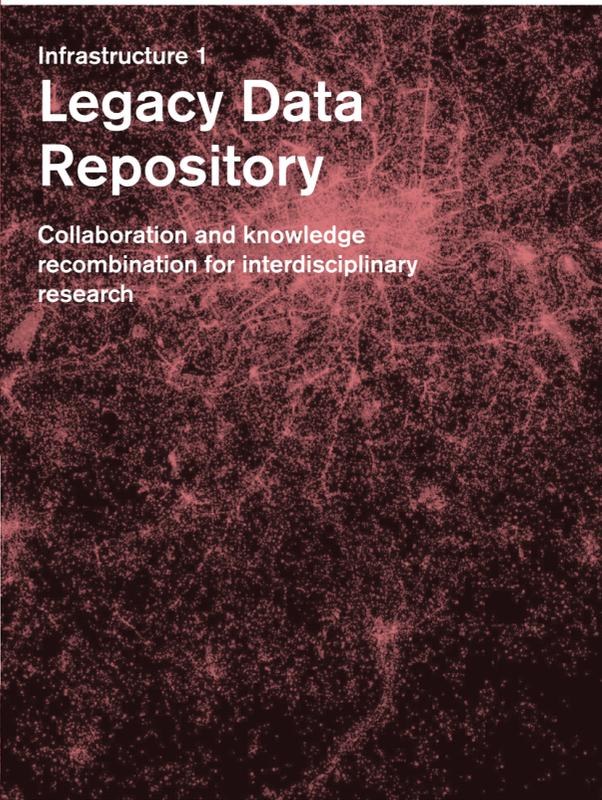

Designing a placemaking research lab for cities' and communities' needs

Infrastructure 1

Legacy Data Repository

Collaboration and knowledge recombination for interdisciplinary research

Preview 1

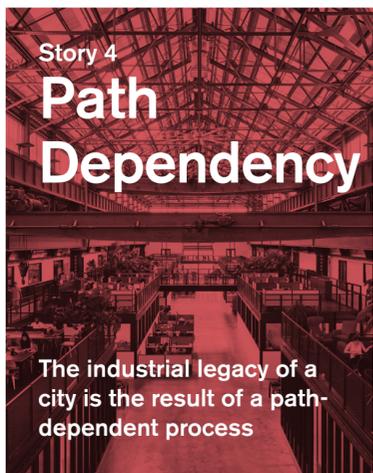

Urban Artificial Intelligence The future city will talk to us

Story 4

Path Dependency

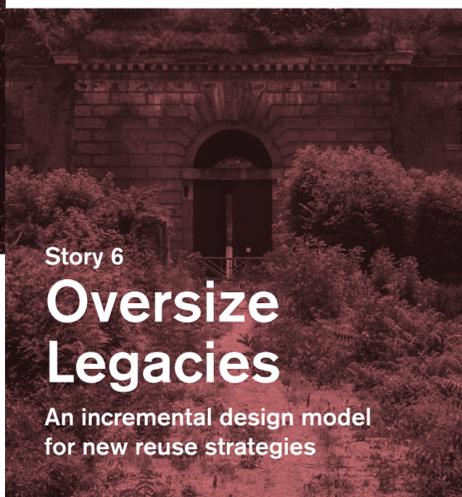

The industrial legacy of a city is the result of a path-dependent process

Story 6

Oversize Legacies

An incremental design model for new reuse strategies

Story 2

Retail City

The retail industry and its localization choices are a fundamental and complex urban legacy

Story #1

Re-production

Matteo Robiglio

Facts

- Since 1970s: 10,000,000 m² of industrial areas have been dismissed.
- 1995 – 2015: 5,000,000 m² of former industrial areas have been reused.

Research question

From the 18th century on, we expelled manufacturing from the city. In the second part of the 20th century, separating manufacturing from the city became an explicit planning goal. At the beginning of

the 21st century, manufacturing is coming back to the city. How does it work? How big will it be? What locations will it prefer? What spaces will it need? What role will it play in the city? And, how many jobs – and what jobs – will it bring back?

Research mission

Object: Torino (IT).

Story #2

Retail City

Giulio Zotteri

Facts

- In the EU, retail accounts for 11.1% of the GDP.
- 33 million jobs (15% of total employment).
- 2/3 of jobs in SMEs.

• It is going through significant transformations (e.g., malls and demalling, e-commerce, products vs. services).

Research question

What are the driving dynamics of the localization of retail in the city? How does e-commerce affect these dynamics?

Why are commercial areas empty? What policies can re-activate these areas?

What are the relationships between the retail industry and the other urban systems?

Research mission

Object: a research observatory to examine the transformation of the retail industry within the city. Timing: 2016 - ongoing. Partners: Città di Torino, Auchan.

Story #3

Adaptive Remediation

Tiziana Tosco

Facts

- 2.5 million sites potentially contaminated in Europe, 350,000 identified as contaminated (EEA European Protection Agency).
- Only 15% of contaminated sites in Europe have been already remediated (EEA European Protection Agency).
- Brownfields usually cause decline of neighbourhoods and have negative impact on economic and social health (OECD).

Research question

Abandoned industrial sites are characterized by soil and subsoil contamination. FULL is developing strategies and tools to conciliate remediation activities (which usually have a negative visual impact and impose restrictions to site availability) with architectural design and building regeneration toward a new, integrated use of industrial heritage sites and brownfields.

Research mission

Object: pilot research sites across Europe. Timing: Sep 2017 – ongoing. Partners: site owners, universities.

Story #4

Path Dependency

Giuseppe Scellato

Facts

- The degree of variety of the knowledge base is a distinctive property of local economic systems.
- European institutions have pushed for the definition of so-called “smart specialization strategies” in regional industrial policies.

Research question

How do cities differ in the persistence of their technological specialization over time?

What are the patterns of diversification for innovation capabilities that are more conducive to the long-term socioeconomic performance of cities? What are the channels through which urban economic systems can expand/define the scope of their industrial legacy?

Research mission

Object: pool of 500 metropolitan areas in Europe and the USA, stratified on the basis of innovation and economic performance indicators. • Cities observed since the late 80s throughout a period of technological evolution and the globalization of production and R&D. • Mix of quantitative large-scale analyses and qualitative case histories to address the impact of specific institutional factors and past events. Timing: 2-year project, 2017 – ongoing. Partners: Università di Torino, Università di Roma Tre, BRICK – Collegio Carlo Alberto.

Story #5

Energy Policies

Elisa Sironbo

Facts

- The economic revenue from energy savings is often irrelevant and cannot be the only driver of the deep renovation advocated by EU policies.
- The liberalization of energy markets has not lowered prices (Eurostat).
- 9.4% of households in the EU-28 do not heat their houses properly (Eurostat).

Research question

Energy retrofitting is a typically urban and large-scale problem, which relates to the legacy of real estate stock, energy markets, users' lifestyles. How do we rethink the theme of energy saving in the context of existing retrofit policies and economic-financial incentives?

Research question

Obsolescence turns oversized structures into an embarrassing heritage. Left to crumble, decay or to be demolished – at unsustainable costs – supersize legacies require specific reuse policies and strategies. The citadel of Alessandria is one such structure. How do we revive the citadel and its symbiotic relationship with the town?

Research mission

Object: Fortified citadel in Alessandria (IT). Timing: An incremental approach. • 2017. Group formation, pilot project and definition of priorities. • 2018-2019. Research projects, intervention strategies. • 2019-2020. In-depth research, adaptive reuse process, on-site actions. Partners: MiBACT, Compagnia di San Paolo, Regione Piemonte, Città di Alessandria.

Story #7

Heritage Tech

Claudio Casetti

Facts

- Italian cultural sites on the World Heritage list: 48 (Unesco)
- 0.7% of Italian GDP allocated to culture (Eurostat).

Research question

ICT technologies will enable historical and archeological sites and assets to be seamlessly explorable and maintainable: from offline browsing to advanced ticketing; from remote monitoring to augmented-reality exploration.

Research mission

Timing: Nov 2017 – ongoing. Partners: Solari di Udine, University of Salento.

Preview #1

Urban Artificial Intelligence

Juan Carlos De Martin

Research preview

By 2050, the United Nations predicts that around 66% of the world's population will be living in urban areas. The data produced by cities' inhabitants will be helpful to provide them with sufficient housing, energy, waste disposal, healthcare, transportation, education and employment. Artificial intelligence will help governments and citizens to analyze that data and to make decisions.

Starting in Nov 2017, FULL is delving into themes involving artificial intelligence, to understand what the best existing or developing tools are that can be applied to the analysis of data referring to the legacy of cities and to their urban and productive structures.

Preview #2

Inequalities and Citizenship

Francesca Governa

Research preview

Growing inequalities in living conditions are common concerns in cities worldwide. FULL will define research parameters and examine specific issues through a dedicated international call for research proposals and through projects and collaborations targeting local phenomena that reflect these global concerns.

A first attempt deals with housing and new inhabitants (one of four tenants in Italy is a foreign citizen). A pilot research project on Sidief housing stock started in November 2017, investigating how housing can be an enabling factor for inclusive citizenship.

Future Urban Legacy Lab

About FULL

Future • /'fju:tʃər/ • noun
A period of time following the moment of speaking or writing; a time regarded as still to come.

Urban • /'ɜ:b(ə)n/ • adjective
In, relating to, or characteristic of a town or city; e.g. 'the urban population.'

Legacy • /'leg.ə.si/ • noun
A situation that exists now because of events, actions, etc., that took place in the past.

Lab • /lə'b/ • noun
A room or building equipped for scientific experiments, research, or teaching, or for the manufacture of drugs or chemicals.

(Oxford Dictionaries)

Mission

FULL explores, imagines and designs the future of global and local urban legacy embodied in city form.

FULL merges and boosts established Polito research experiences into a brand new interdisciplinary approach to urban phenomena, built on the integration of morphology, economy, evidence-based design and socio-technical understanding.

Research

Studying the urban realm as a space offers the unique chance of rejoining the separate paths of human sciences, hard sciences and design sciences.

FULL assumes a complex and open definition of urban space as both a perspective to interpret the main challenges posed by a rapidly urbanizing world and a place of experimentation for projects and scenarios.

Research fields

Research activities are based on cross- and inter-disciplinary methods, collaboration and experimentation, internationalization and comparison, analysis and design, theory and practice.

FULL's main aims are:

- To bridge knowledge of the past and visions for the future in the urban realm.

- To design socio-technical innovation scenarios for relevant global urban challenges and to support decision-making processes.

Point of view

FULL is characterized by a point of view focused on:

- Understanding present global trends.
- Working in a trans-scalar and critical perspective.
- Grounding heritage discourse in present praxis.
- Exercising evidence-based design research as a socially responsible and reflective practice.

DENERG

Urban energy networks and grids, renewable energies in urban settings.

DAD

Urban and architectural design, landscape design, construction technology, urban history, heritage preservation and restoration, geomatics.

DIST
Urban planning, urban geography, urban economics, project evaluation.

DAUIN
Big data, information technologies, public data management and policies in cities.

DIGEP

Innovation economics and innovation management.

FULL structure

7 departments
20-40 researchers public and private partners

DIATI

Environmental assessment, urban environmental quality indicators, remediation techniques for urban post-industrial sites.

DET

Digital networks in urban settings, device-to-device communications.
